JAAD RANKS NO. 1 AMONG DERMATOLOGY JOURNALS
Publication’s impact factor increases by 25 percent

SCHAUMBURG, Ill. (July 20, 2017) — The Journal of the American Academy of Dermatology is the top peer-reviewed journal in its field, according to the most recent impact factor report from Thomson Reuters.

A journal’s impact factor reflects how often the average article in that journal has been cited in a given year. In 2016, the year of the most recent report, JAAD was ranked No. 1 among dermatologic journals with an impact factor of 7.002, a 25 percent increase over the previous year.

“JAAD’s editorial team is focused on seeking and publishing cutting-edge research that interests our readers and influences the practice of dermatology,” says board-certified dermatologist Bruce H. Thiers, MD, FAAD, editor of JAAD. “As a result, the journal’s impact factor has grown steadily over the years, and this most recent ranking underscores JAAD’s importance to the specialty.”

JAAD is currently the most widely read dermatology journal in the world, according to Kantar Media. In 2009, the Special Libraries Association named JAAD one of the most 100 influential journals of the past 100 years.

Visit jaad.org to read the most recent research published in the journal or to submit an article for consideration.
